

ABSTRACT

DIAGNOSTIC TEST DEVICES

- 5 A diagnostic cap comprising a substantially cup-shaped body, an absorbent plug located within the body, and at least one diagnostic test reagent located in or around the absorbent plug. The resulting diagnostic test caps can be made very compact for fitting interchangeably onto the end of a biopsy punch or swab. The cap may be transparent, and may contain a plurality of different
- 10 test reagents spaced-apart within the cap that undergo color changes in the presence of different analytes.
